# Install SAP GUI on Windows

Step-by-step guide to download SAP GUI from ManbiTech, install it, add your SAP system and log in for the first time. Enter your system details once and every step below shows **your** values.

ManbiTech customer guide | ⏱ 10–15 minutes | Windows 10/11 · macOS | Updated November 2026

1. **Download** — From the ManbiTech link
2. **Install** — Windows or Mac
3. **Add system** — Your SID, instance, server
4. **Log in** — Client, user, password

Personalise this guide with your own System ID, server and user online:
www.manbitech.com/en/blog/sap-gui-installation-guide

## Before you start

SAP GUI is the program you use to open and work in your ManbiTech SAP system. Installing it takes about **15 minutes** and you only do it once on each computer.

**Windows 10 or 11, 64-bit**
The installer in this guide is for 64-bit Windows.

**Administrator rights**
You must be able to “Run as administrator”.

**About 4 GB free space**
For the download, the unzipped files and the program.

**Your login details**
System, client, user and password from your ManbiTech welcome message.

**Golden rule:** download SAP GUI **only** from the ManbiTech link in this guide, and never share your SAP user or password with anyone, including people who say they are from ManbiTech.

## A Download the software

Get the SAP GUI 8.00 package from the ManbiTech download link.

### 1 Open the download link

Click the button (or copy the link into Chrome or Edge). It opens the ManbiTech file share.

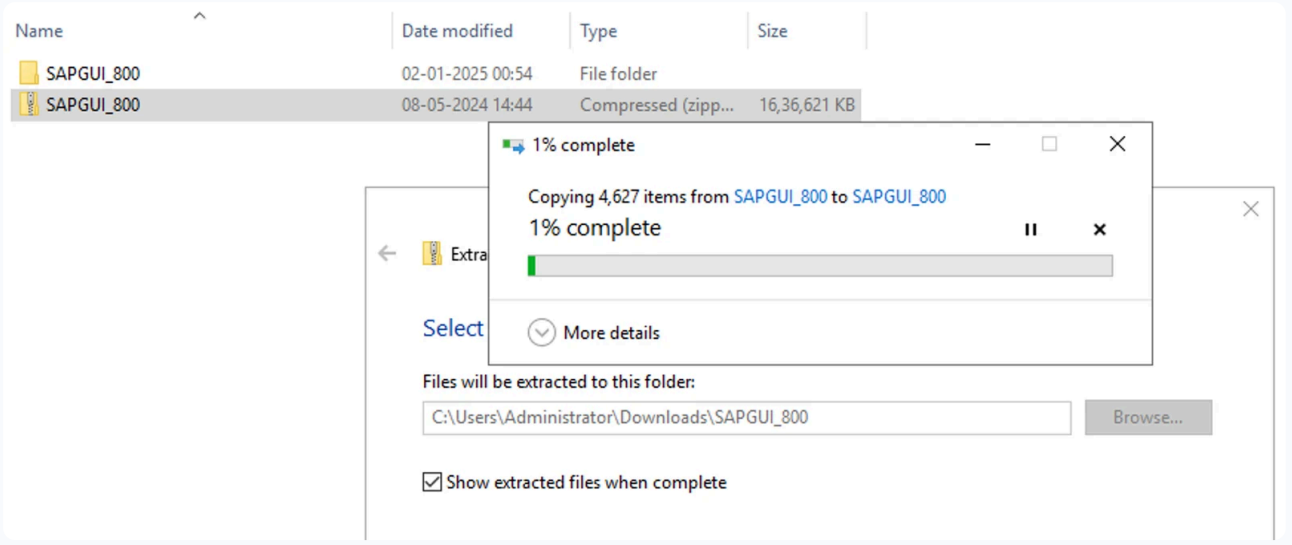

⬇ Download SAPGUI_800.zip (Windows)

### 2 Download the file

Click **Download** at the top of the page. The file **SAPGUI_800.ZIP** (about 1.6 GB) is saved in your **Downloads** folder. Wait until the download has finished.

## 3 Unzip the file

Open **Downloads**, right-click **SAPGUI_800.ZIP**, choose **Extract All...** and click **Extract**. A folder named **SAPGUI_800** is created.

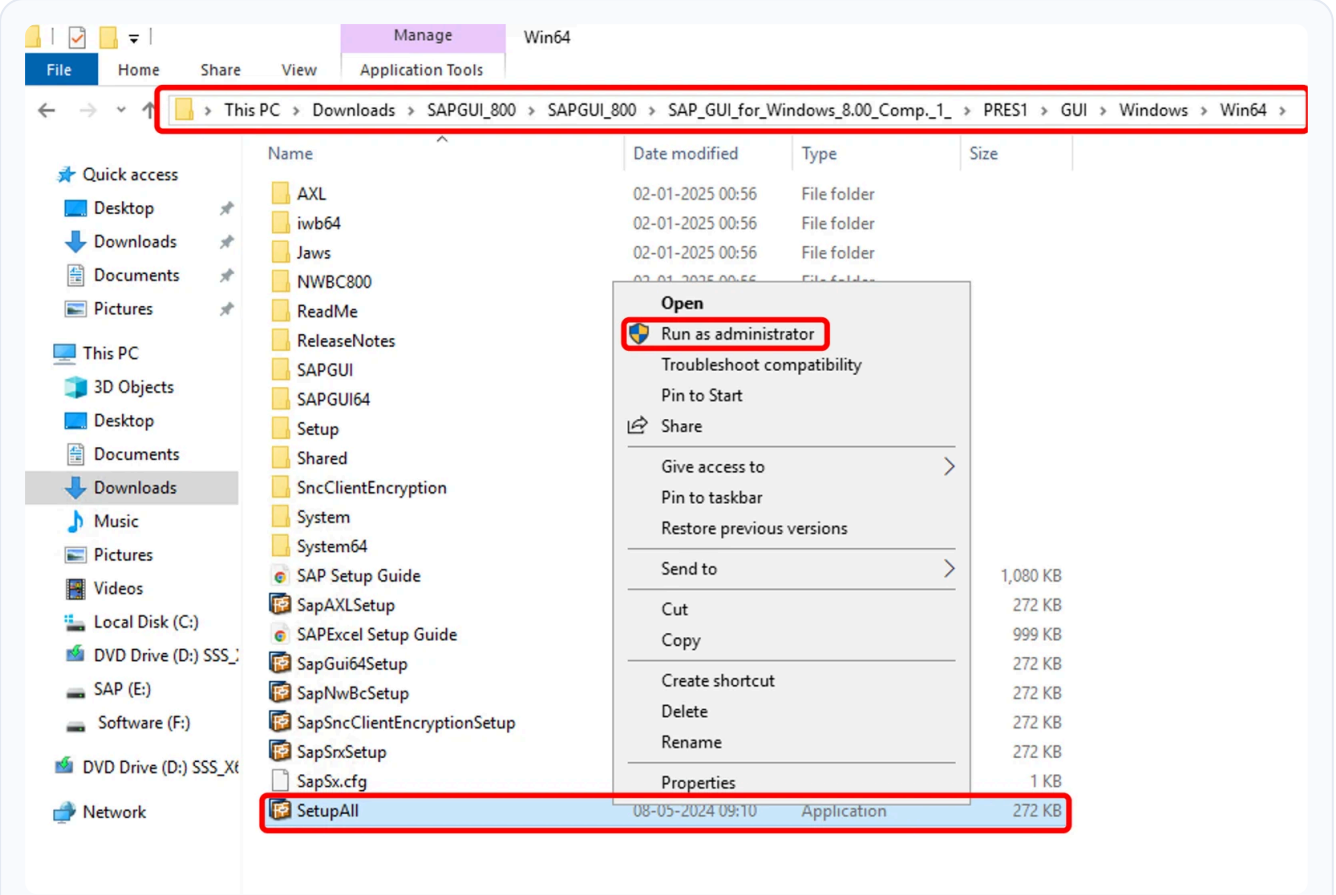

*Extract All... unpacks about 4,600 files – this can take a few minutes.*

## B Install SAP GUI

Run the SAP Front-End Installer and keep the default choices.

### 4 Run SetupAll as administrator

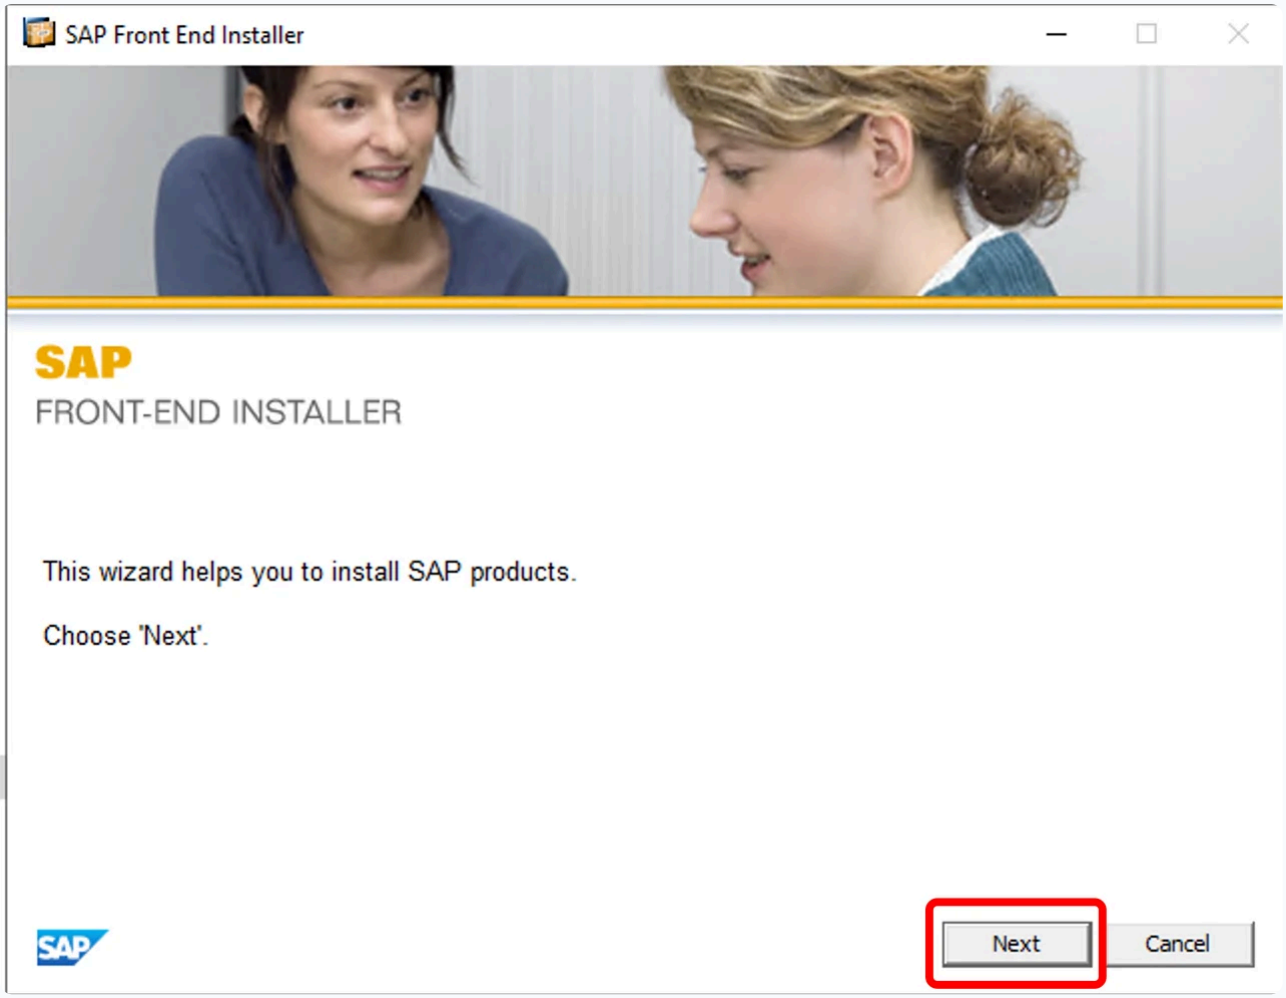

Open **SAPGUI_800 → … → PRES1 → GUI → Windows → Win64**. Right-click **SetupAll** and choose **Run as administrator**. Click **Yes** if Windows asks for permission.

*The red boxes show where to click.*

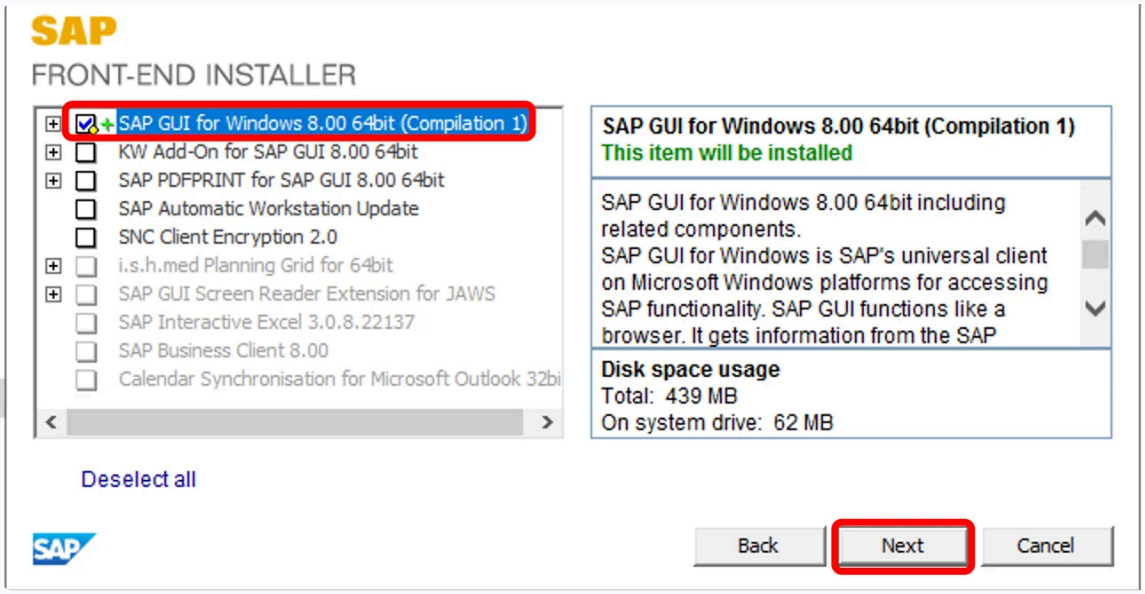

## 5 Start the installer

The SAP Front-End Installer opens. Click **Next**.

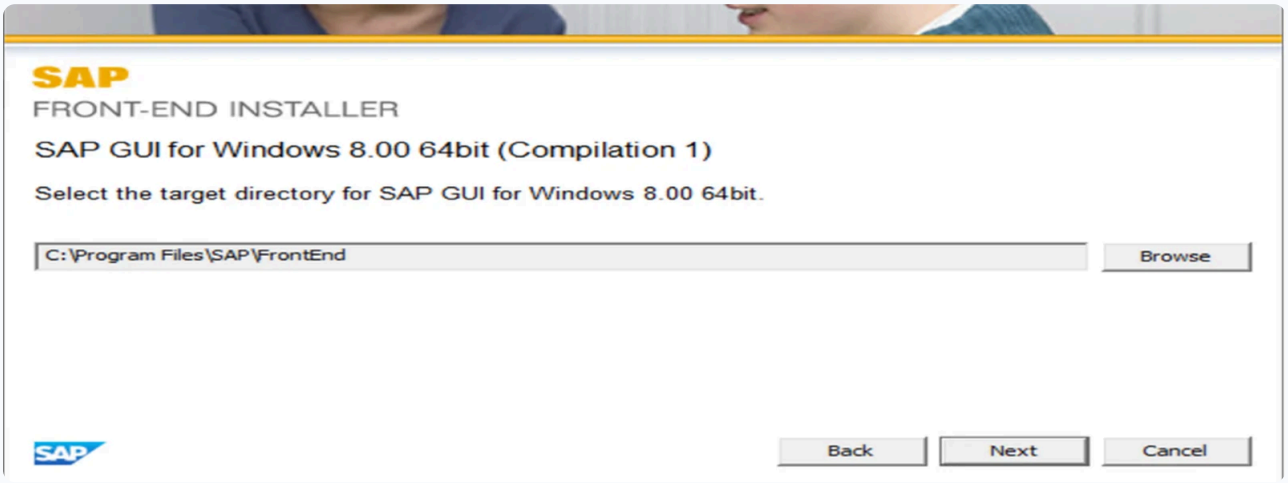

## 6 Choose SAP GUI for Windows

Tick **SAP GUI for Windows 8.00 64bit (Compilation 1)** and click **Next**. You do not need the other items.

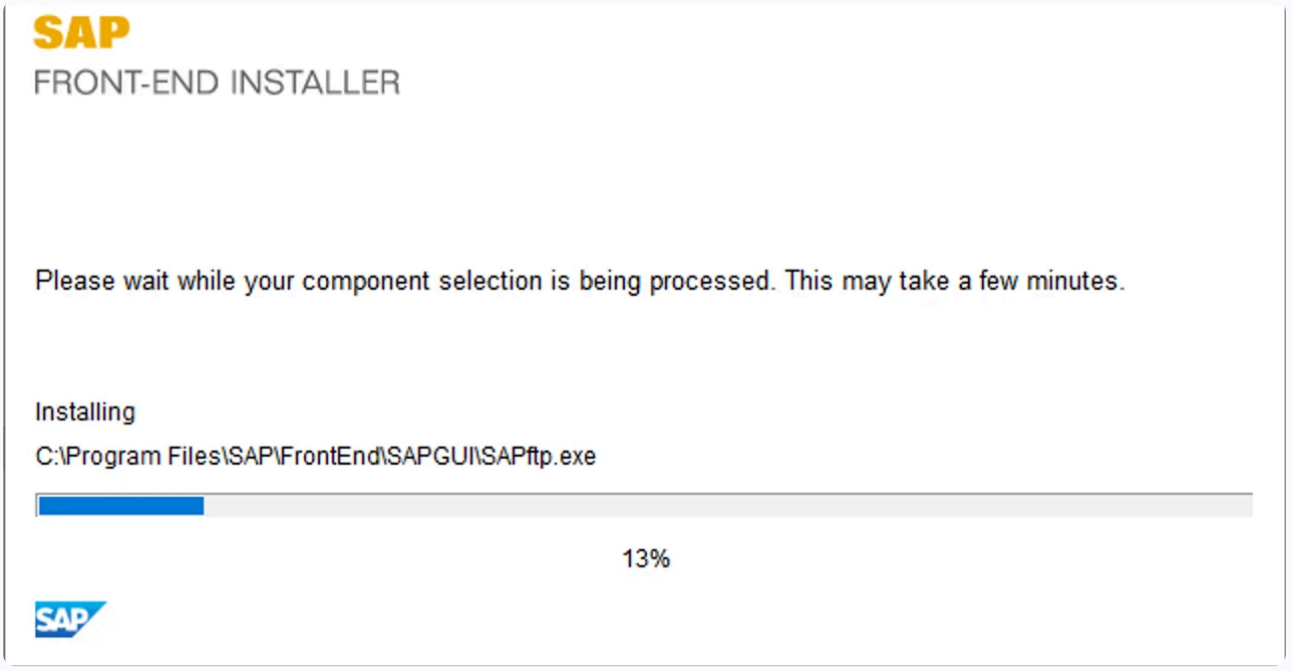

## 7 Keep the install folder

Leave the folder as **C:\Program Files\SAP\FrontEnd** and click **Next**.

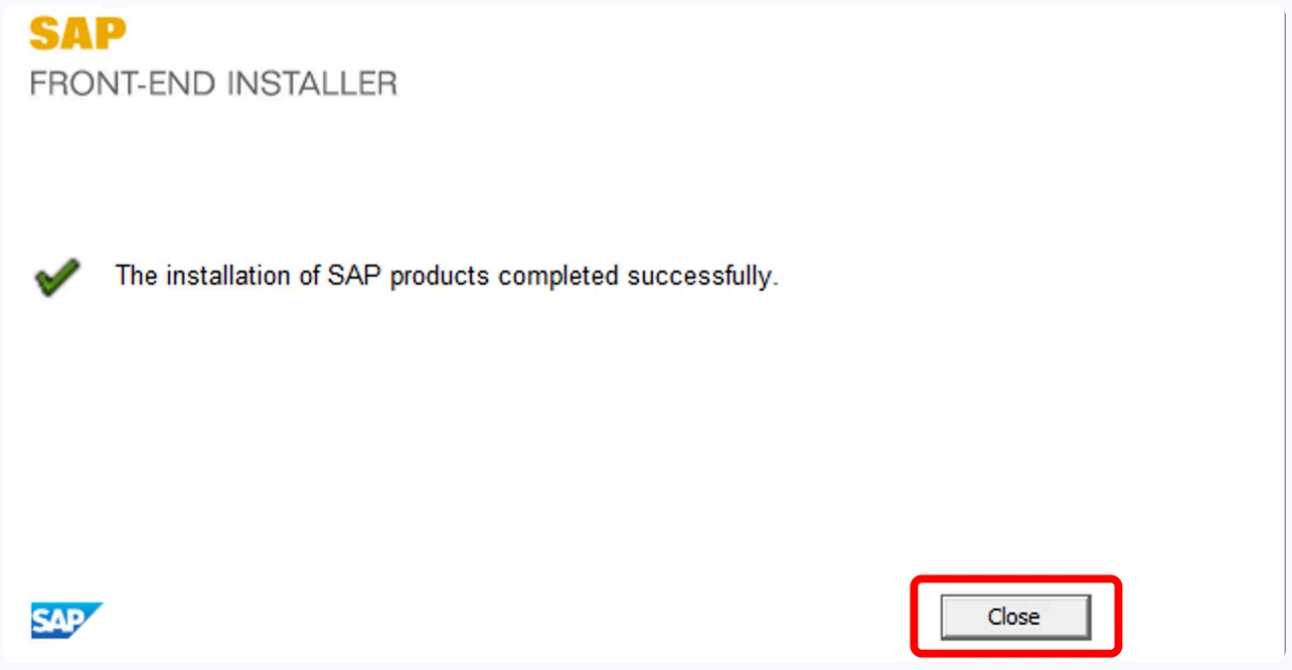

## 8 Wait for the installation

SAP GUI is being installed. This takes a few minutes – do not close the window.

## 9 Finish

When you see **The installation of SAP products completed successfully**, click **Close**.

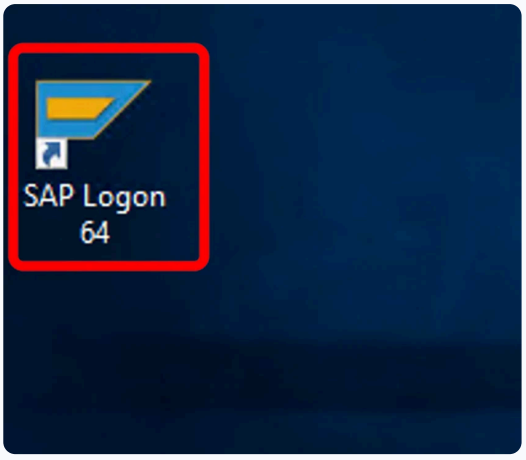

## C Add your SAP system

Do this once, with your system details.

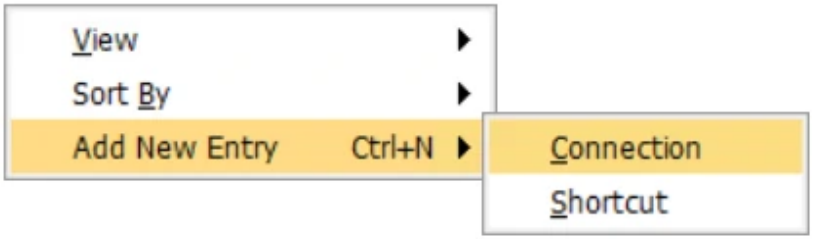

### 10 Open SAP Logon 64

Double-click the new **SAP Logon 64** icon on your desktop (or search for it in the Start menu).

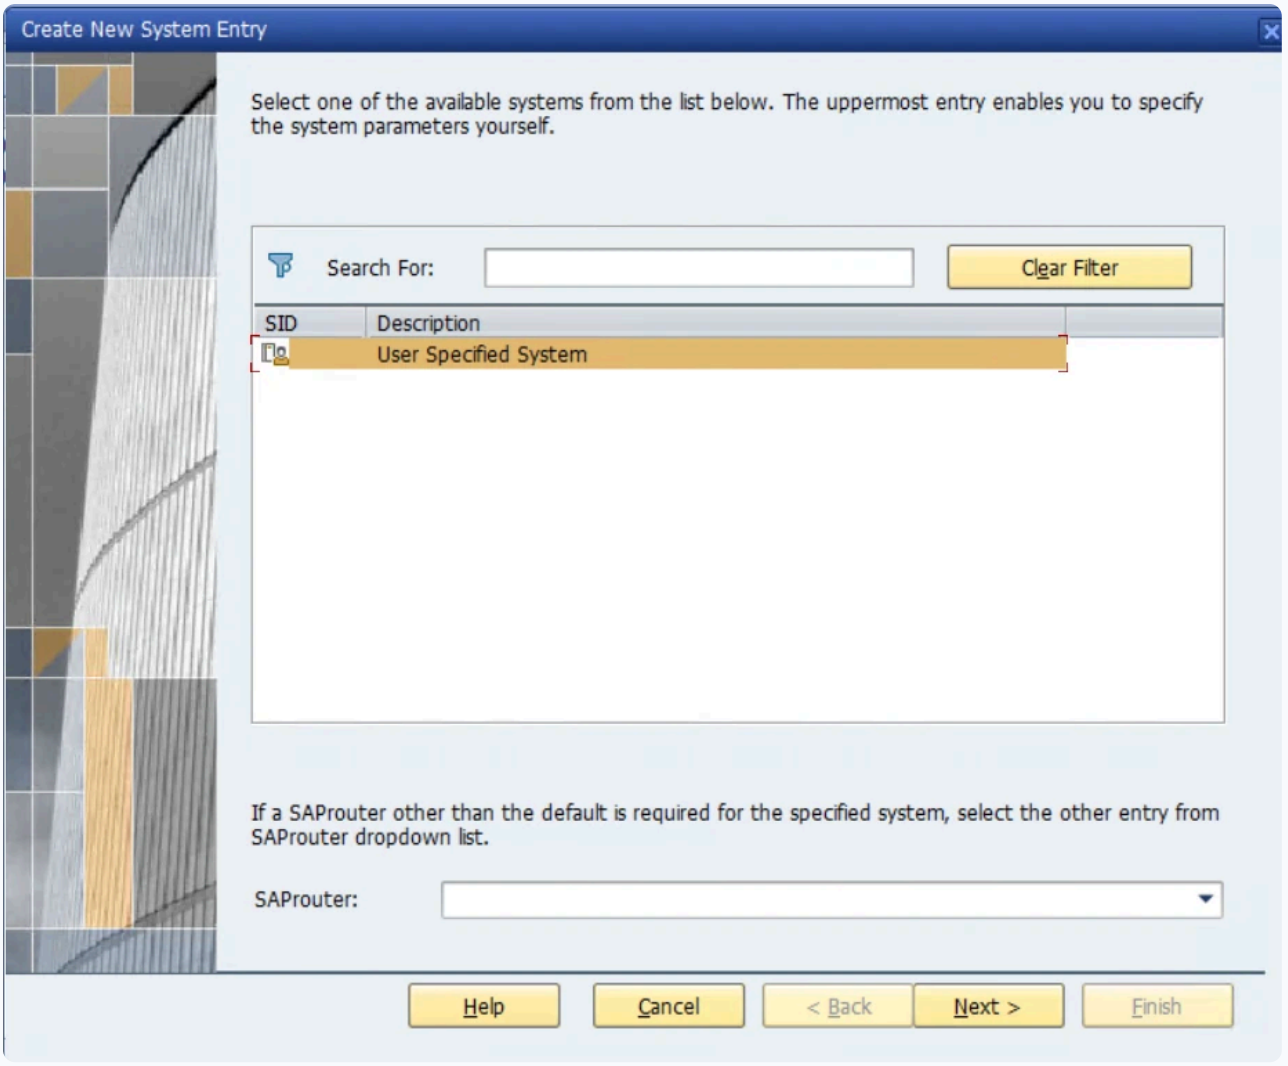

### 11 Create a new connection

In SAP Logon, right-click an empty area of the connection list and choose **Add New Entry → Connection**. You can also press **Ctrl + N**.

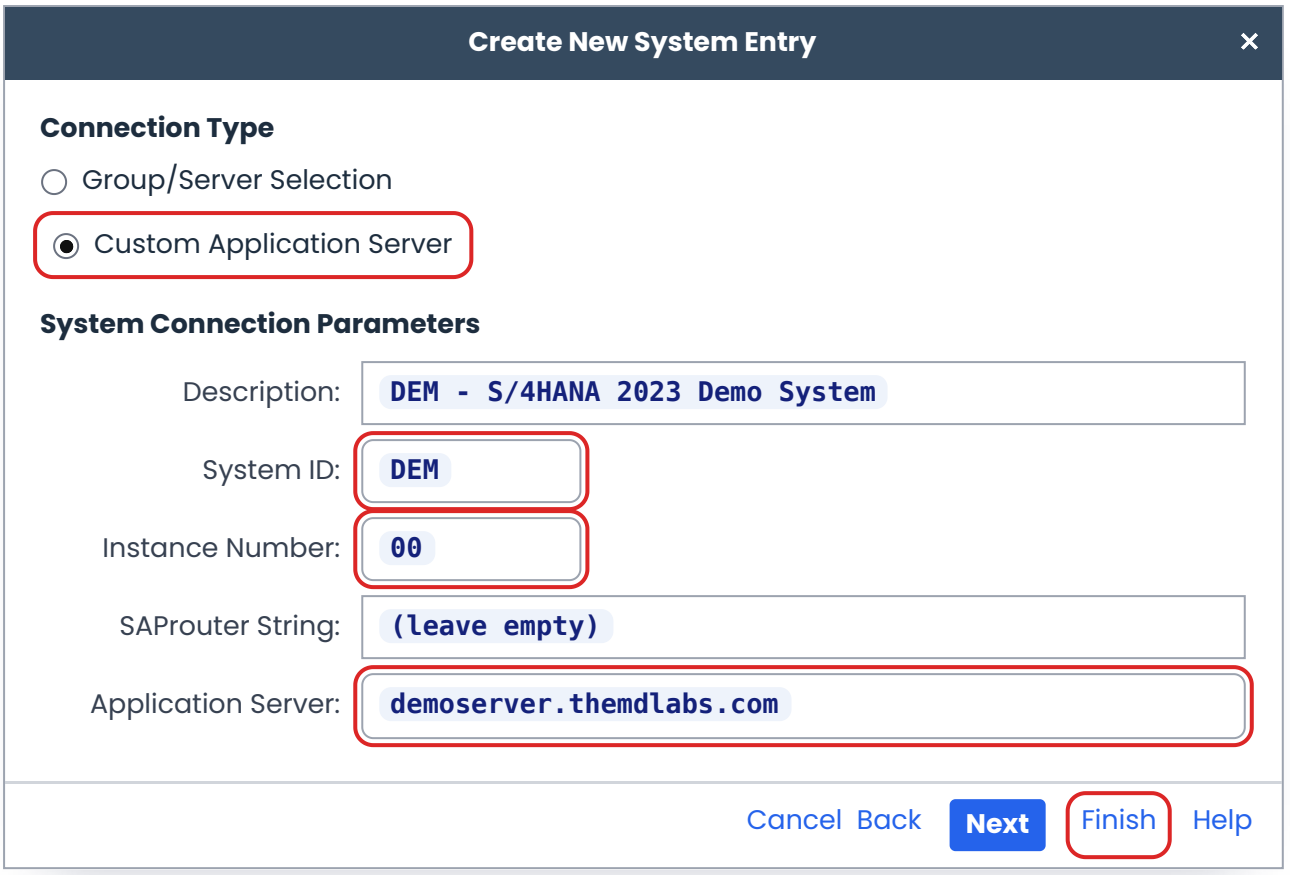

## 12 Choose User Specified System

The **Create New System Entry** window opens. Click **User Specified System** at the top of the list (leave SAProuter empty unless ManbiTech gave you one), then click **Next >**.

## 13 Enter your system details

Select **Custom Application Server**, type the values exactly as shown below, then click **Finish**.

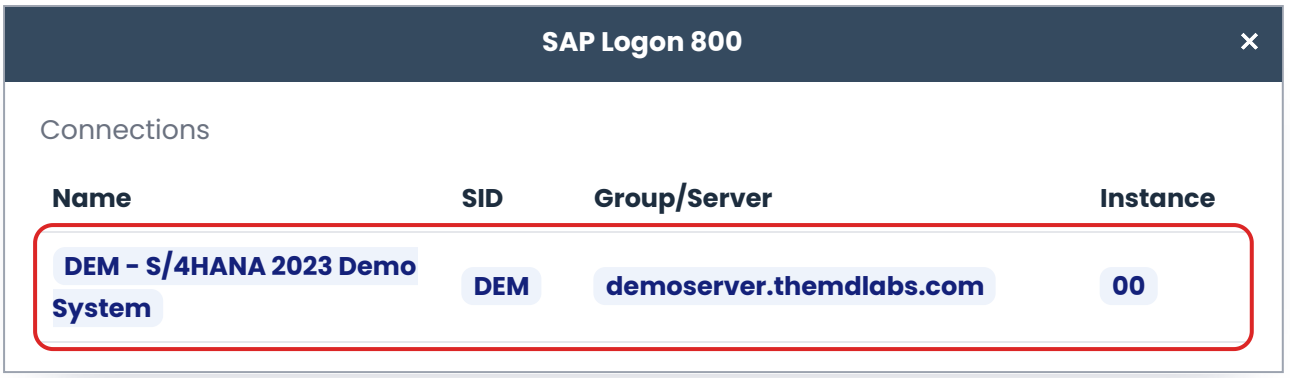

**Which details go where**

| Field | What to enter |
|---|---|
| **Connection Type** | Custom Application Server |
| **Description** | **DEM - S/4HANA 2023 Demo System** (any name you like) |
| **Application Server** | **demoserver.themdlabs.com** |
| **Instance Number** | **00** (two digits) |
| **System ID** | **DEM** (three characters) |
| **SAProuter String** | **leave empty** |

### 14 Check your system is listed

Your new system now appears in the SAP Logon list.

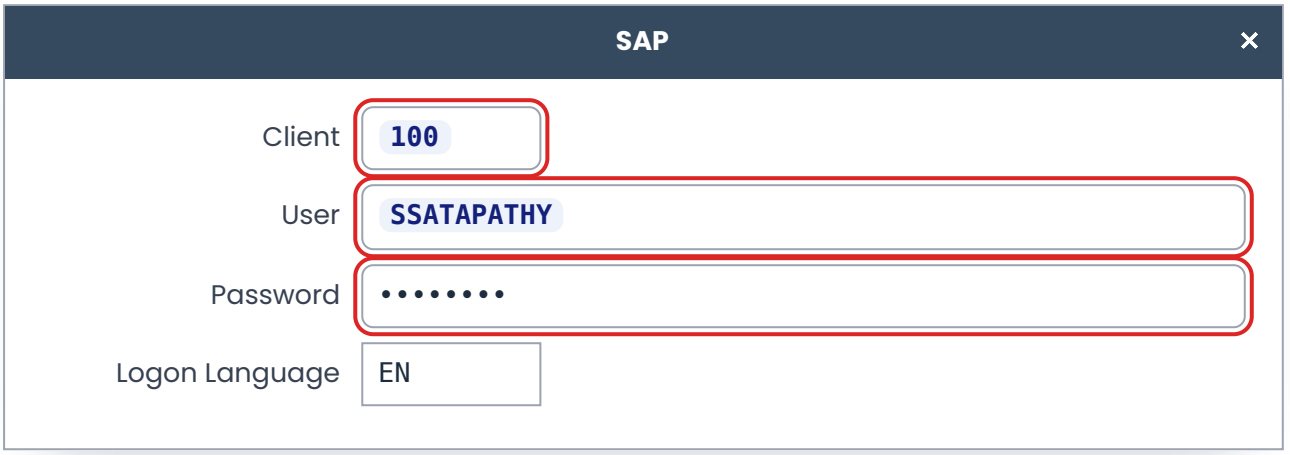

## D Log in

Open your system and sign in with your SAP user.

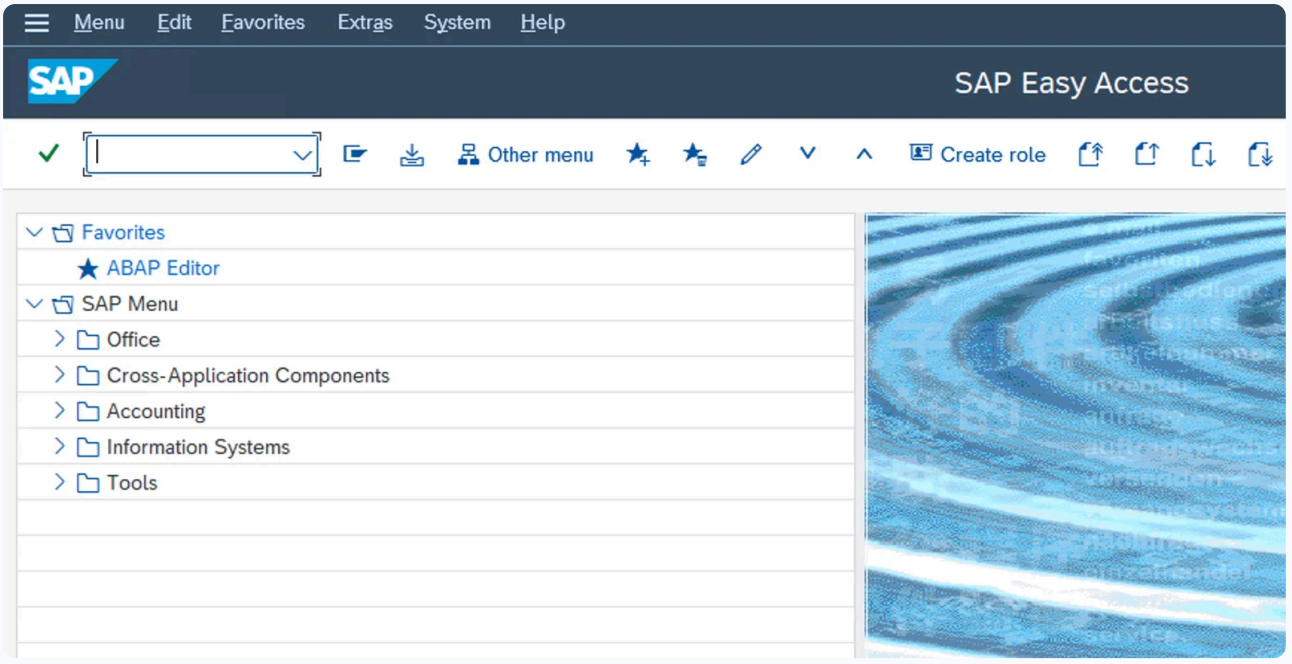

### 15 Open the system and sign in

Double-click **DEM – S/4HANA 2023 Demo System** in SAP Logon. Enter client **100**, user **SSATAPATHY** and the password from ManbiTech, then press **Enter**. On your first login SAP asks you to set a new password of your own.

## 16 You are in

The **SAP Easy Access** screen opens. SAP GUI is ready to use.

## E Good to know

Quick fixes for the most common problems.

### The download link does not open

Copy the full link into Chrome or Edge. If it still asks for access, contact ManbiTech.

### I can't find SetupAll

Make sure you unzipped the file (step 3) and opened the **Win64** folder, not the ZIP file itself.

### Installation stops with an error

Close other programs, right-click SetupAll and choose **Run as administrator** again.

### SAP Logon 64 is not on my desktop

Search for **SAP Logon** in the Windows Start menu.

### "Partner not reached" or connection error

Check Application Server **demoserver.themdlabs.com**, Instance Number **00** and System ID **DEM** against your ManbiTech details, and check your internet connection. Some office networks block port **3200** – try a different network or a phone hotspot.

### "Name or password is incorrect"

Check the client ( **100** ), the user and that Caps Lock is off. After a few wrong tries the user is locked – ask ManbiTech to unlock it.

### Forgot my SAP password

Ask ManbiTech to reset it.

**✓ Do**

- Download only from the ManbiTech links
- Run SetupAll as administrator (Windows)
- Change your password at first login
- Log off when you finish (System → Log Off)

**✕ Don't**

- Share your SAP user or password
- Install SAP GUI from other websites
- Change settings you weren't told to change
- Save your password on shared computers
